Machine used	:	JCB 3CX SM, Backhoe Loader
Application	:	Construction & Paving
Tyres in use	:	Galaxy Super Industrial Lug – 440/80-24

The Pol-Bruk company is a family run business in Kraków, Poland, that is into the construction and paving jobs. Kraków is a city that is developing very quickly and has a very competitive market when it comes to services offered in the construction industry. Mr. Artur Planta the younger owner of this family business says "We are small family company. We operate mainly in small and mid-range construction market." He says that their JCB XC3 is mainly running at construction areas that have minimal transportation facilities. "Thus we constantly drive on very hard surfaces where tyres are under big risk of being damaged." Says Planta.

He adds "We don't have many machines, so it is very important for us very important that our machines work without break downs. In the past we had problems with punctures and we had to stop work many times." He says that punctures occurred ever after very careful operation by either his father or himself.

They began to look out for good tyres to avoid such puncture related breakdowns. Their local tyre dealer advised them to go for GALAXY Super Industrial Lug. Planta says "Now the tyres have worked for more than 1000 hours without a single puncture, we did not get such a performance from the tyres used earlier." He also adds that "There are only slight signs of tread wear and the tread looks like 'brand new', so we expect the Galaxy Super Industrial Lug to work for another 2500 – 3000 hours."

"We have never experience this kind of results earlier. In case we need to fit new tyres again, we will surely go for Galaxy again." Said a very satisfied Mr. Planta.
