

SUCCESS STORY

Galaxy High Lift Radial helps Slovakian business improve productivity!

GALAXY
APPLICATION SPECIFIC, PURPOSE BUILT.

Customer	:	Agriculture Holding Agroslužby Bardejov, s.r.o.
Location	:	Bardejov, Slovakia
Machine used	:	Claas 6030cp SCORPION VERIPOWER (telehandler)
Application	:	Farm and construction works
Tyres in use	:	Galaxy High Lift Radial R-1 460/70R24 (17.5LR24)

The BUSOV Farm is one of few farms of Agroslužby Bardejov, s.r.o. Agroholding. This 8000Ha farm is located mountainous region of North Slovakia, producing fodder and agricultural crops.

They use a Claas 6030 CP SCORPION VARIPOWER telescopic handler which mainly works as a loader in the farm and assisting construction jobs. It also is used for transporting material and to clear snow during winter. It is used on a eight to ten hour shift per day for five days a week. During work it traverses a variety of surfaces that include concrete, paved surfaces and muddy terrain. Also during winter it has to travel on snow. Thus the tyres on this telehandler must offer good traction, last longer and have minimum downtime due to breakdowns due to punctures.

This machine came originally fitted with a tyre from another brand. After the rear tyres wore out in 1500hours they were replaced with the Galaxy High Lift Radial R-1 in the same size. The Galaxy High Lift Radial is giving the same high degree of performance that was expected from an ATG brand.

Mr. Stanislav Kalinak the person in charge of this farming operation says "I have tried other tyres with comparable prices in the past. They delivered 60-70% less tyre life. My Galaxy tyre gives equal life time as products with much higher prices." He also observes that all tires gave best performances with regard to traction, comfort and stability that combined with attractive performance to price ratio far higher than other tires. This has helped Mr. Kalinak to decide to go for new set of Galaxy High Lift Radial R-1 17,5LR24. He has chosen the radial tyre since the machine also does a lot of transport duty.

This experience of Mr. Kalinak about Galaxy brand comes of his own experience as fleet manager having also used other Galaxy products, especially the Galaxy Earth-Pro tractor radial tyres in his John Deere 6430. The John Deere has size 340/85R24 and 460/85R34 in the front and rear axles respectively. There is not sign of tread wear even after rigorous use of 8 month. The tyres continue to provide good comfort and superior traction during work.

Having experienced the product performance and the service of the dealer, he will continue to use Galaxy tyres in the future for his machines.
