Machine used	:	Locust 752 / JCB 3CX
Application	:	Construction works (Machine Rental)
Tyres in use	:	Galaxy Hulk L-5, 10-16.5

Mr Daniel Chobot runs the ChobotDan Company which was established in 1999 to principally cater to earth excavation and road transport markets in the region.

His company rents construction machines with or without operators. Their fleet of seven machines include four backhoe loaders, two skid steer loaders and an excavator.

CHobot Company rents these all-rounder machines to perform all the ground work, from preparatory work for the different kind of construction projects to building construction and loading & removal of residues.

Mr. Chobot says that "At this time, three of my seven machines are fitted with Galaxy tyres."

Now his Skid steer loaders are fitted with Galaxy Hulk L-5 in size 10-16.5 in the Locust 752. His Bobcat S250 is already on the second set of Galaxy Hulk L5.

"The first set of Hulks delivered 4 times more motor hours than the original equipment tyres which, incidentally, were from one of the biggest names in tyre manufacturing." "The Galaxy Hulks provided two years of service without any punctures!" says Mr Chobot. "In that way Hulk proved what was promised by my tyre advisor from Cemmat company Mr. Tomas Pavlik" he adds.

"The good experience with the Hulks on the skid steer machines encouraged me to fit so my JCB 3CX Backhoe Loader also with Galaxy tyres. The front tyre is a pair of Galaxy Jumbo Hulk L4 in size 12.5/80-18 and rear 480/80-26 IND – that pair give optimum tire life and traction."

"I will continue good cooperation with Galaxy tyres in future also for other machines." – stated Mr Chobot
