

SUCCESS STORY

THE GALAXY HULK PROVES IT AGAIN!

The Hulk is the premium L-5 skidsteer tire in Galaxy's line-up. This tire has proven itself around the world working excellently in the most hazardous environment and surface conditions.

HARSCO MINERALS of France had a recurring problem of downtime due to puncture in their skidsteer loader that was employed in the grounds of APERAM Steelworks at Imphy, which is a division of Arcelor Mittal Special Steels. HARSCO MINERALS specializes in handling materials from metallurgical firms and converting them into environmentally friendly and commercially viable products.

ATG's field engineers who visited the contractor introduced the Galaxy HULK L-5 tire and the contractor agreed to taken on trial a set of 4 tires. The FERMEC 918 skidsteer loader works on a large large area in the site which is strewn with extremely sharp metal pieces and debris. It moves and loads highly abrasive residual materials such as a mixture of sand, steel and minerals. It is also used to load steel chips and metal rods.

The tyres were fitted in May 2012 and have been operated for more than 520 hours (in 18 months) without any puncture. Thus no downtime, which is critical for its operational environment. The Hulks also have more than 6 millimeters of usable tread depth remaining in the tyre, even after working in such highly abrasive surface.

The contractor is very satisfied with the Galaxy HULK L-5 tire. The tread has better life and delivers superior value and a lowest total cost. He has already confirmed his intention to buy a fresh set of Galaxy HULK L-5, 10-16.5 10PR, when the current set is due for replacement.
